

```

1  from selenium import webdriver
2  from selenium.webdriver.common.by import By
3  from selenium.webdriver.common.keys import Keys
4  import time
5
6  # 1. Open a clean Google Chrome browser window
7  driver = webdriver.Chrome()
8  try:
9      # 2. Direct the browser to Google
10     driver.get("https://google.com")
11     driver.maximize_window()
12     print("Browser opened successfully!")
13     # 3. Find the search text input box using its HTML 'name' attribute
14     search_box = driver.find_element(By.NAME, "q")
15     # 4. Simulate a user typing a query and hitting 'Enter'
16     search_box.send_keys("Selenium Python automation")
17     search_box.send_keys(Keys.RETURN)
18     print("Search query submitted.")
19     # 5. Leave the window open for 5 seconds so you can watch the results load
20     time.sleep(5)
21 finally:
22     # 6. Safely shut down the browser session and clean up system memory
23     driver.quit()
24     print("Browser closed. Test complete!")

```

```

● PS C:\Users\Afroz\Desktop\Selenium exp> python app.py
Browser opened successfully!
Search query submitted.
Browser closed. Test complete!
